BOGIREDDY OBULREDDY

Data Science & Machine Learning Engineer

+91 9502153462 | gmail | Linkedin | Github

PROFESSIONAL SUMMARY

Results-oriented Data Science graduate specializing in Machine Learning and AI, with hands-on experience building end-to-end ML pipelines and real-time computer vision systems. Developed a driver drowsiness detection system achieving detection accuracy as very good and also do a project of Kidney disease prediction and get a very good accuracy of the model. Proficient in Python, TensorFlow, and scikit-learn. Seeking a Data Science or ML Engineer role to deliver measurable business impact through data-driven solutions.

EDUCATION

B.Tech – CSE (Artificial Intelligence) | *2021 – 2025*

Parul University, Vadodara, India | GPA: 7.01

Intermediate – MPC | *2019 – 2021*

Narayana Junior College, Nellore, India | 89.7%

SSC – 10th Standard | *2018 – 2019*

Saraswathi High School, Vinjamur, Nellore, India | GPA: 9.8

WORK EXPERIENCE

Data Science Intern | **CODTECH IT Solutions Pvt. Ltd.** | *Dec 2024 – Mar 2025 · 3 months* ***view***

- Applied **supervised learning** techniques to 5+ real-world datasets, improving baseline model accuracy by ~12% through feature engineering and hyperparameter tuning.
- Performed end-to-end **EDA and data preprocessing** on datasets records using Pandas and NumPy, reducing data inconsistencies .
- Built and evaluated ML classification models (Logistic Regression, Random Forest, XGBoost) using **scikit-learn**.
- Presented data-driven insights and **interactive visualizations** to stakeholders, reducing reporting time.

PROJECTS

Driver Drowsiness Detection & Alert System | *Python, MediaPipe, OpenCV, MySQL, Telegram API, Pygame*

- Achieved real-time detection accuracy for drowsiness and yawning by computing Eye Aspect Ratio (EAR) and Mouth Aspect Ratio (MAR) via MediaPipe FaceMesh on live video streams.
- Reduced false-positive alert rate by triggering voice (pyttsx3) and alarm (pygame) alerts only after 2 consecutive seconds of detected drowsiness.
- Integrated Telegram bot to instantly notify registered contacts with driver name and live GPS location stored in MySQL.
- Git hub Repo : project

Kidney Disease Prediction Using Deep Learning | *machine learning,* deep learning , mlflow, github actions,dvc

- Built a CNN/VGG16 transfer-learning model for kidney disease image classification using TensorFlow/Keras, achieving ~90% validation accuracy.
- Built a reproducible DVC pipeline for data ingestion, model preparation, training, and evaluation; tracked experiments and registered models
- Implemented DVC for data/pipeline versioning and MLflow + DagsHub for experiment tracking and model registry.
- Github Repo : project

TECHNICAL SKILLS

Programming languages: Python, SQL

ML/DL: Scikit-learn, TensorFlow, Keras, PyTorch, XGBoost, LSTM, CNN, Transfer Learning
MLOps: DVC, MLflow, DagsHub, Git, GitHub Actions, Docker
Generative AI: LlamaIndex, Ollama, Hugging Face, RAG

Data Analysis & Visualization: Pandas, NumPy, Matplotlib, Seaborn, Plotly, Streamlit

Tools & Platforms: Google Colab, Kaggle, VS Code, Jupyter Notebook, Antigravity

Relevant Coursework: Machine Learning, Artificial Intelligence, Deep Learning, NLP, GENAI,
